How each line is split

WORKED EXAMPLE, LINE 01

```
Hours × rate
  6 × 2,500.00 = 15,000.00

Advance      = 15,000.00 × 40/100 = 6,000.00
Hosting      = 15,000.00 × 30/100 = 4,500.00
Post-hosting = 15,000.00 × 30/100 = 4,500.00
Cross-add    = 6,000.00 + 4,500.00 + 4,500.00 = 15,000.00

INSTALLMENT LEDGER

One invoice, three demands. The amount due with this copy is installment 1. Installments 2 and 3 are demanded against this same invoice number when the stage is reached.

GST composition of the agreed price

GST is not charged on this invoice. No supplier GSTIN is printed, so this is not a tax invoice under the CGST Act and input tax credit must not be claimed on it. The working below only shows how ₹ 2,00,000.00 splits if treated as a price inclusive of 18% (CGST 9% + SGST 9%, intra-state, Karnataka, SAC 998314). Nothing is added on top.

SAME COMPOSITION, BY INSTALLMENT

Taxable value, CGST, and SGST are shared in proportion to ₹ 80,000 / ₹ 60,000 / ₹ 60,000. The one-paisa round-off sits on the installment that would otherwise be a paisa over, so each demand stays a round rupee amount.
